7 If using a filling kit with metal outlet, hold the neck of balloons over this nozzle and press inwards, releasing when the balloon is inflated to the correct size.

8 Remove the balloon from filling kit. In the case of latex balloons fitted with plastic valve, pull the ribbon or string attached.

Foil balloons are fitted with a valve which seals the balloon automatically, therefore simply attach ribbon of the desired length.

Latex balloons should be tied or clipped and a ribbon attached. See diagram.

9

Turn off valve.

10

To remove Balloon Gas filler (regulator) turn container off clockwise and release pressure by deflecting the rubber nozzle. Remove Balloon Gas filler by turning anti clockwise.

Balloon Gas Safety Instructions

You should never deliberately inhale Balloon Gas as Balloon Gas displaces the oxygen supply in our lungs which can lead to asphyxiation.

Store the container in an upright position and secure with chain or hooks to prevent toppling.

Always keep the container in a well ventilated area away from fire risks and source of heat.

Fire hazards should always be avoided. However, in the event of a fire, vacate the area and call the Fire Brigade informing them that the a cylinder of helium is there.

Ensure that there is good ventilation when containers are carried in vans for cars. They must be securely restrained in case of an accident.

To avoid accidents, as Balloon Gas is stored at high pressure, the container valve should never be opened without the filling kit attached and should be tightly closed when the container is not in use.

You must always remove the filling kit if moving the container any distance or ceasing to use it. Remember to turn off the container valve and release pressure in the filling kit before removing it.

Please return the container when empty. The container and filling kit (unless the latter has been purchased) remain the property of Oceans Floral Limited.

Balloon Gas

Safety and Operating Instructions

Everybody loves balloons! Spectacular, colourful balloons add that something extra to parties and parades that set them apart from everything else that's going on at the same time. Balloons make sound financial sense for commercial promotions and can be used to promote practically anything. Their uses are limited only by your imagination.

What is Balloon Gas?

FEATURES	BENEFITS
BOC Balloon Gas is 97% helium and helium is lighter than air.	It gives balloons special lifting qualities.
Balloon Gas is non-toxic and non-flammable	It is safe and simple to use

How can I use Balloon Gas?

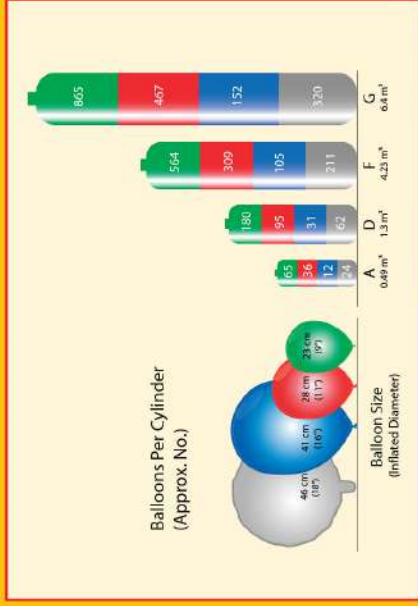

Balloon Gas can be used to inflate latex and foil balloons. These floating balloons can then be used to add-value to any occasion. From children's parties to fund-raising at school fairs, from weddings to social functions, balloons are always a favourite. Floating balloons can also be used to create a stunning floral display, to decorate point of sale displays or even as a direct response medium through mass releases. The possibilities are limitless!

How long do Balloons remain inflated with Balloon Gas?

It depends on the quality of the balloon. Quality latex balloons should float for 6-8 hours, cheaper balloons will not last as long. Therefore it is a good idea to inflate your balloons on the day of the party or event. It is also interesting to note that balloons will increase in size as the temperature increases, therefore if filling balloons in the morning you may not need to fill to full size. Foil balloons filled with Balloon Gas and properly sealed should last for seven days or more.

How many Balloons can I fill?

This depends on the size of balloon you are filling, so here are some approximate figures to guide you. It is recommended that you fill balloons until they are round, not pear shaped.

Balloon Gas Operating Instructions

1

Please check container pressure upon delivery - 20000 kPa (A & F sizes) and 15200 kPa (D & G sizes) when full and advise your nearest BOC Gas & Gear Centre of containers that do not meet this pressure. BOC cannot accept claims once the container is part empty.

2

Secure the container in an upright position, making sure that the valve is accessible.

3

Fit Balloon Gas filler (regulator) to container turning handwheel clockwise until hand-tight. No spanner required.

4

Turn on container by opening valve anti-clockwise about one turn.

5

Listen for any obvious leak. If there is a leak, turn off the valve and check you have fitted the filling kit correctly. Try the procedure again and, if the problem persists, close the valve and advise your BOC Gas & Gear immediately.

6

If using a flexi-tip filling kit then fit the neck of balloon over nozzle, gently press the nozzle down then release when balloon is inflated to desired size.
